# INSTALLATION INSTRUCTIONS

## INSTALLATION TECHNIQUE FOR THE APPLICATION OF FOIL

1. Clean the surface, where the product will be applied, carefully with cleaning spirits and a lint-free cloth.
2. Place the decoration with a piece of masking tape on each side. This will help you to keep the decoration in its place, while you measure the place for it.
3. Pull the top of the backside of the paper off and press thoroughly the frontliner, so that it sticks.
4. If needed cut up the decoration in between the letters to ease the mounting. Turn the decoration upwards, and pull off the rest of the back paper.
5. After this, fold the decoration backwards, but keep it away from the surface – and start scraping. With a firm grip scrape from the middle and out. It is important to overlap the movement, so air bobbles can be avoided.
6. Remove the masking tape from the middle, and repeat the procedure on the other side.
7. If the decoration is held in place with tape or frontliner: Pull off the tape in an angle of 180 degrees. Pull carefully and make sure the corners of the decoration, along with the foil, isn't pulled off too. If so, then scrape it softly back on again.

In case of air bobbles in the foil, one can use a needle to press a hole on the side of the bobble, and after softly scrape from the opposite side.
